

# GOLD WING

The Gold Wing is a luxury touring motorcycle produced by Honda that handles long distances with unmatched ease and comfort. There are three categories now in production: The Aspencade, SE and the GL.

New for 2001, the GL is now equipped with a 1832 cubic capacity, six cylinder engine which is currently the biggest engine of any mass-produced motorcycle. The GL is available in four colours including the striking Pearl Yellow.

The range of Gold Wing motorcycles on show at last year's event was fascinating and included 1100GL-1500GL models, Aspencades, three-wheelers, trailer towing models and side car equipped bikes. Interestingly, many Gold Wings were found together in pairs, they certainly are sociable animals!

There are many Gold Wing inspired internet sites which cover topics such as touring routes, organised events (known as 'Wing Dings' or Treffens), bike maintenance, customisation, and there is even a dedicated web ring linking various sites. Why not take a look at the latest links from the Americana Web Page?
